

## Objectives

- Understand why all data is represented in binary in a computer
- Define a Bit, Byte, Kb, Mb and Gb
- Convert integers to binary numbers
- Convert binary numbers to integers
- Show how characters can be represented using ASCII

# Decimal number system (Sometimes called the Denary system) 

-Why 10 digits?

## What about computers?

- Computer use millions of electronic circuits and switches which can either be On or Off

- On is represented by $\mathbf{1}$ and $\mathbf{O f f}$ is represented by 0

## Binary - On \& Off

- The standard On / Off symbol on a switch is a 1 and a 0 :

## Bits and bytes

- 0 or a $1=1$ Bit (Binary Digit)
- 8 Bits = 1 Byte
- 1000 Bytes = 1 Kilobyte (Kb)
- $1000 \mathrm{~Kb}=1$ Megabyte (Mb)
- $1000 \mathrm{Mb}=1$ Gigabyte (Gb)
- 1 Byte = 1 Character of text
- How many Gb in a Terabyte?
- How many bytes in a Megabyte?

## Binary representation

- One switch can only represent 2 possible states
- On or Off
- Two switches can represent 4 states
- On \& On
- On \& Off
- Off \& On
- Off \& Off

ON

## Binary representation

Number of Switches Possible combinations or states

## 1 2 3 4 5

6
7
8

## Binary to denary conversion

## How our decimal number system works

$$
\begin{array}{rr}
100101 \\
5 & 8 \\
3
\end{array}
$$

- The number 583 represents five 100 s + eight $10 s+$ three $1 \mathrm{~s} .500+80+3$
- As we move from right to left, each digit is worth ten times the previous one

## The Binary system

## 4 101

- In Binary, there are only two digits, 0 and 1
- As we move from right to left, each digit is worth twice as much as the previous one
- What decimal number does the binary number above translate into?

## Binary to Decimal conversion

- Work out the Binary numbers from 0 to 10

| Decimal | Binary |
| :---: | :---: |
| 0 |  |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 6 |  |
| 7 |  |
| 9 |  |
| 10 |  |

## Binary to Decimal conversion

- Work out the Binary numbers from 0 to 10

| Decimal | Binary |
| ---: | ---: |
| 0 | 0 |
| 1 | 01 |
| 2 | 10 |
| 3 | 11 |
| 4 | 100 |
| 5 | 101 |
| 6 | 110 |
| 7 | 111 |
| 8 | 1000 |
| 9 | 1001 |
| 10 | 1010 |

## Worksheet 3a

- Try Challenge 1 on the worksheet

## Decimal to Binary

- Convert 28 to Binary
- Method
- Working right to left write out the numbers 1, 2, 4, 8 and so on doubling each time to 128
$\begin{array}{llllllll}128 & 64 & 32 & 16 & 8 & 4 & 2 & 1\end{array}$

## Decimal to Binary

- Convert 28 to Binary
- Method
- Working right to left write out the numbers $1,2,4,8$ and so on doubling each time to 128

| 128 | 64 | 32 | 16 | 8 | 4 | 2 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 1 | 0 | 0 | 0 | 0 |

28 has a 16 in it, with remainder 12
Put a 1 under the number 16

## Decimal to Binary

- Convert 28 to Binary
- Method
- Working right to left write out the numbers $1,2,4,8$ and so on doubling each time to 128

| 128 | 64 | 32 | 16 | 8 | 4 | 2 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 1 | 1 | 0 | 0 | 0 |

12 has an 8 in it, remainder 4
Put a 1 under the number 8

## Decimal to Binary

- Convert 28 to Binary
- Method
- Working right to left write out the numbers $1,2,4,8$ and so on doubling each time to 128

| 128 | 64 | 32 | 16 | 8 | 4 | 2 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 1 | 1 | 1 | 0 | 0 |

Put a 1 under the number 4
$28=16+8+4$
The binary number is 00011100

## Activity

- Try the questions on Worksheet 3a to convert binary numbers to and from decimal numbers

## Representing characters

- How are characters represented in binary?
- How many characters are there on your keyboard?
- How many bits would be needed to represent up to 128 characters?

## ASCII

American Standard Code for Information Interchange

- Numerous different codes for representing data have been invented, but ASCII is used nowadays on nearly all computers
- Originally only 7 bits were used but now the eighth bit is used to give extra characters such as ©, ® etc.
- How many different characters can be encoded using seven bits?
- How about eight bits?

## ASCII Table

| Decimal | Binary | Character | Decimal | Binary | Character | Decimal | Binary | Character |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 32 | 00100000 | space | 64 | 01000000 | @ | 96 | 01100000 |  |
| 33 | 00100001 | ! | 65 | 01000001 | A | 97 | 01100001 | a |
| 34 | 00100010 | " | 66 | 01000010 | B | 98 | 01100010 | b |
| 35 | 00100011 | $£$ | 67 | 01000011 | C | 99 | 01100011 | c |
| 36 | 00100100 | \$ | 68 | 01000100 | D | 100 | 01100100 | d |
| 37 | 00100101 | \% | 69 | 01000101 | E | 101 | 01100101 | e |
| 38 | 00100110 | \& | 70 | 01000110 | F | 102 | 01100110 | $f$ |
| 39 | 00100111 | , | 71 | 01000111 | G | 103 | 01100111 | g |
| 40 | 00101000 | ( | 72 | 01001000 | H | 104 | 01101000 | h |
| 41 | 00101001 | ) | 73 | 01001001 | I | 105 | 01101001 | i |
| 42 | 00101010 | * | 74 | 01001010 | J | 106 | 01101010 | j |
| 43 | 00101011 | + | 75 | 01001011 | K | 107 | 01101011 | k |
| 44 | 00101100 | , | 76 | 01001100 | L | 108 | 01101100 | I |

## ASCII

- It is a character-encoding scheme originally based on the English alphabet
- ASCII codes represent text in computers, communications equipment, and other devices that use text
- For example: a lower case ' $\mathbf{f}$ ' is represented by the following combination of bits in the ASCII table

$$
f=1100110 \text { or in } 8 \text { Bits, } 01100110
$$

- 8 bits is called a Byte

## Numbers in ASCII

- Numbers as well as letters and other symbols are represented in ASCII
- What is the bit pattern for the character 5 in ASCII?
- What is the bit pattern in binary for the number 5 ?
- When 5 is pressed on the keyboard, the ASCII bit pattern is sent to the computer. It can't be used for arithmetic!

## Challenges

- Challenge 1: Use the ASCII table on the ASCII Worksheet to write down the binary equivalent of your first name
- Challenge 2: Write a brief coded message for someone in binary using the ASCII Code sheet
